2024 Application for Radiologic Technology

Radiologic Technology Site Visit

You must schedule an appointment for a visit with a hospital radiology department. Directions for visiting one of the Billings hospitals will be listed on the radiologic technology program webpage under the Admission Requirements (Competitive Application Process) link - Site Visit Scheduling Instructions. Please remember that site visits can be completed in other locations besides Billings.

You must dress appropriately for the visit. No t-shirts, jeans or shorts can be worn. Below is a site visit form for all applicants to fill out and submit with your application. If you have already visited a hospital radiology department for at least four (4) hours and within the last year, you need to have the technologist that supervised your visit sign this form. You must still answer the questions listed on this form and submit your answers with your application. Confidentiality is a major issue in any medical environment and any patient information, such as the patient’s name, history, condition, procedures performed or the results of those procedures, must be kept strictly confidential.

I understand the importance of patient confidentiality and by signing below I agree to keep all patient information confidential.

Signature of applicant: __________________________________ Date: ____________________

Applicant’s Name__________________________ Student ID ___________ Telephone ______________

Site Visit Facility__________________________ Visit Date _________ Hours observed______

Signature of technologist that supervised your visit: ____________________________________________

Site Visit Narrative
Answer these questions on a separate sheet of paper and submit the answers with your application.

1. What procedures or x-ray examinations were you able to observe? Give a brief description of each exam.
2. List the job responsibilities of the radiologic technologist(s) that you observed.
3. How does the radiology department staff interact with each other?
4. What did you notice about the interactions between the radiologic technologist and the patient?
5. What part of the site visit did you find the most interesting and why?
